

SOFTWARE CONFIGURATION MANAGEMENT PLAN

Configuration Item Register and Configuration Control

Document ID	GF-SCM-001	Version	1.0
Status	Draft / For Review	Repository	https://github.com/djureta23109563-spec/GeoFaree
Prepared for	GeoFare project	Date	21 September 2026

Important correction: The previous document presented a configuration-item table, but it did not provide a complete software configuration management plan and it listed repository paths without showing that the paths had been verified. This revision adds the missing SCM header and control sections and marks the current item list as requiring repository verification before it is treated as a baseline.

1. Purpose

This plan defines how GeoFare software configuration items are identified, versioned, changed, reviewed, baselined, and maintained throughout the project lifecycle.

2. Scope

The plan covers project documentation, diagrams, source code, database/schema artifacts, build/configuration files, API documentation, and user-facing documentation that are maintained in or referenced by the GeoFare repository.

3. Configuration Management Objectives

Maintain a unique identity for each configuration item; keep version and status information consistent; ensure approved changes are traceable; prevent unverified files from being treated as baselined items; and keep the repository as the authoritative source for project configuration.

4. Configuration Identification

Each item is identified by NAME, CATEGORY, FILE PATH, SOURCE/OWNER, VERSION, and STATUS. A configuration item should only be marked Baseline after the path has been confirmed in the repository and the item has been reviewed/accepted for the applicable baseline.

5. Configuration Item Register

The register below preserves the entries from the supplied SCM material. The added Verification column is intentional: the supplied material did not establish that every listed path currently exists in the GitHub repository. Therefore, these entries must not be treated as confirmed repository configuration items until checked against the repository.

NAME	CATEGORY	FILE PATH	SOURCE / OWNER	VERSION	STATUS	VERIFICATION
GeoFare README	Documentation	/README.md	Dev Team	v1.0.0	Baseline	Pending
LICENSE	Documentation	/LICENSE	Dev Team	v1.0.0	Baseline	Pending
.gitignore	Build/Config	/.gitignore	Dev Team	v1.0.0	Baseline	Pending
DFD Stage 0	Documentation	/assets/diagrams/01_DFD_Stage0.png	Dev Team	v1.0.0	Baseline	Pending
DFD Stage 1	Documentation	/assets/diagrams/01_DFD_Stage1.png	Dev Team	v1.0.0	Baseline	Pending
DFD Stage 2	Documentation	/assets/diagrams/01_DFD_Stage2.png	Dev Team	v1.0.0	Baseline	Pending
Structured Chart	Documentation	/assets/diagrams/02_Structured_Chart.png	Dev Team	v1.0.0	Baseline	Pending
HIPO Diagram	Documentation	/assets/diagrams/03_HIPO_Diagram.png	Dev Team	v1.0.0	Baseline	Pending
HIPO Description	Documentation	/assets/docs/03_HIPO_Description.docx	Dev Team	v1.0.0	Baseline	Pending
Structured English	Documentation	/assets/docs/Structured_English.docx	Dev Team	v1.0.0	Baseline	Pending
Pseudo-Code	Documentation	/docs/05_Pseudo_Code.md	Dev Team	v1.0.0	Under Change	Pending
ERD	Documentation	/assets/diagrams/06_ERD.png	Dev Team	v1.0.0	Baseline	Pending
Data Dictionary	Documentation	/assets/docs/07_Data_Dictionary.docx	Dev Team	v1.0.0	Baseline	Pending
Database Schema	Data/Schema	/src/database/schema.sql	Dev Team	v1.0.0	Baseline	Pending
Mobile App Source	Source Code	/src/mobile-app/	Dev Team	v0.1.0	Under Change	Pending
Web Dashboard Source	Source Code	/src/web-dashboard/	Dev Team	v0.1.0	Under Change	Pending
API Source	Source Code	/src/api/	Dev Team	v0.1.0	Under Change	Pending
Android Manifest	Build/Config	/src/mobile-app/AndroidManifest.xml	Dev Team	v0.1.0	Under Change	Pending
Build Gradle	Build/Config	/src/mobile-app/build.gradle	Dev Team	v0.1.0	Under Change	Pending
Package JSON	Build/Config	/src/web-dashboard/package.json	Dev Team	v0.1.0	Under Change	Pending
Environment Config	Build/Config	/src/.env.example	Dev Team	v0.1.0	Baseline	Pending
API Documentation	Documentation	/docs/API_Documentation.md	Dev Team	v0.1.0	Suspended	Pending
User Manual	Documentation	/docs/User_Manual.docx	Dev Team	v0.0.0	Suspended	Pending

6. Versioning Rules

Use a consistent version format for controlled releases. Documentation in the supplied register uses v1.0.0, while active source/configuration items use v0.1.0. A version may only be advanced when the corresponding configuration item changes and the change is recorded.

7. Status Definitions

Baseline = accepted and controlled item at an approved configuration point. Under Change = item is actively being modified and is not yet the next approved baseline. Suspended = item is retained for traceability but is not currently active. Pending verification = repository existence/path has not yet been confirmed.

8. Change Control

Changes to a baseline item should identify the affected configuration item, describe the requested change, record the requester/owner, document review or approval, and update the item version/status when the change is accepted.

9. Baseline Control

The initial baseline should be created only after the configuration-item paths have been reconciled with the GitHub repository. The baseline should include the exact repository path and version/commit reference used for the release.

10. Configuration Status Accounting

Maintain a current register of item names, paths, versions, and statuses. When an item is added, removed, renamed, or moved, update this register at the same time as the repository change.

11. Configuration Audits

Before submission or release, perform a simple repository-to-register audit: verify that every listed path exists, remove stale entries, add missing controlled items, and confirm that the recorded version/status agrees with the repository state.

12. Authority and Storage

The GitHub repository identified in the document header is the intended authoritative location for the project configuration. The register should be stored with the project SCM materials so that its contents can be reviewed together with the repository.

Repository verification action before final submission

1. Open the GeoFaree main branch and compare every FILE PATH in Section 5 against the actual repository tree.
2. Delete rows for items that do not exist; rename paths to their actual locations; add any real controlled files that are missing.
3. Change VERIFICATION from Pending to Verified only after the path has been confirmed.
4. Set the final Baseline/Under Change/Suspended status from the actual project state rather than from the old assignment table.

Source basis: the previously supplied GeoFare SCM Configuration Item Register.
